DETAILED ACTION

1. Claims 2 and 4-5 are presented for further examination.

EXAMINER'S AMENDMENT

2. Authorization for this examiner's amendment was given in a telephone interview with Steven A. Shaw on November 9, 2004.

The application has been amended as follows:

In the claims:

Claim 2, line 2, delete the first instance of "an" and change "methods" to "method". Also, in line 10, delete "(TP)". Also,

Claim 4, line 2, change "adapted" to "optimized" to be consistent with the claim language of claim 2.

Claim 5, line 4, after "determining", insert a comma. Also, line 4 change "automation" to "automaton". Also, after "thresholds" in line 5, insert ", a plurality of switching thresholds;". Also, line 4, "the output" should be changed to "an output" and in line 8, delete "and", and in line 10, delete the first instance of "an" and change "suing" to "using".

Allowable Subject Matter

3. Claims 2 and 4-5 are allowed.

As per claims 2 and 4-5, specifically independent claims 2 and 5, the prior art of record fails to teach or adequately suggest a self-learning stochastic method for modulation selection for a system (transceiver) wherein a modulation method (technique or scheme) is chosen based on an dynamically adaptive modulation selection that utilizes a self learning algorithm, in combination with the other claimed features and or features as claimed by the claimed invention.

The closest available art is issued to Needham et al., U.S. Patent 5,764,699, Yoshida, U.S. Patent No. 6,359,934 and Yoshida, U.S. Patent No. 6,452,964.

All of the aforementioned references teach adaptive modulation techniques, and Needham et al specifically teaches the use of a modulation selector feature. However, none of the aforementioned references teaches the use of a self-learning stochastic method for modulation selection, in other words, a self-learning algorithm. The aforementioned systems simply teach selecting a modulation technique (method or scheme) based on the channel quality and therefore do not offer the disclosed capabilities of the instant invention by providing for a modulation selection method that maximizes throughput of data.
